Multi-position vee plow VP280-400

The V-plow is available in four widths ranging from 2.80 to 4.00 meters. The plow wings can be angled up to 35°, enabling you to use a larger plow than usual.

The plow is made of high-strength steel to ensure long service life. It comes with either a large BM or three-point mount with 8° of horizontal play.

Vertical rotation is controlled by a hydraulic cylinder whose pressure is controlled by an accumulator. This prevents the plow from bouncing at

high speeds, resulting in better plowing performance.

The release pressure of the blade holders is also adjustable. The wear steel is mounted on a suspension system that prevents snow from pressing in between the blade holder and the plow wings. The plow can be equipped with an automated valve enabling simultaneous control of both wings.

Optional:

> Wheels and snow spray guard are available for road plowing.

Technical data: VP 280 VP 320 VP 370 VP 400
